

Kleemann

The Kleemann line of aggregates and minerals processing equipment leverages the resources of Wirtgen Group to provide the world with the most technologically advanced products for quarries, sand and gravel pits, and opencast mines.

In 2018, four new Kleemann Mobiscreen EVO aggregate classifying plants complement Kleemann's mobile jaw, impact and cone crushing plants with easy mobility, flexible application options and high output. Now being introduced to North America are the track-mounted double-deck classifying screens **MS 702i EVO** and **MS 952i EVO**, and the triple-deck classifying screens **MS 703i EVO** and **MS 953i EVO**.

The MS 702i/703i EVO achieves a maximum output of 386 t/h and the MS 952i/953i EVO an hourly output of up to 551 tons. The two plant sizes have a screening area in the upper deck of 75 or 102 sq. ft., respectively. These classifying screens -- with their convenient transport dimensions and short set-up times -- enhance the productivity of contractor crushing operations.

Kleemann's product brand names are the *Mobicat* mobile primary jaw on crawler chassis with feeding unit, pre-screen and conveyors built in various sizes ranging from 221 to 1,100 tph capacity; the *Mobirex* mobile primary impactor on crawler chassis with feeding unit, pre-screen and conveyors built in various sizes ranging from 386 to 772 tph capacity; the *Mobicone* mobile secondary crushing machines with feeding unit, cone crusher and a screen to produce up to three particle sizes; the *Mobifox* mobile secondary crushing machines with feeding unit, impact crusher and a screen producing up to three particle sizes; and the *Mobiscreen* mobile screening units, producing up to four particle sizes with fixed or swiveling discharge belts, with a screening surface dependent on ultimate use.
